What is Tox Sick?

Tox Sick is a debilitating condition caused by exposure to mold. Mold is a type of fungus that can grow on damp surfaces, such as walls, ceilings, and floors. When mold spores are inhaled, they can cause a variety of health problems, including:

- Respiratory problems, such as coughing, wheezing, and shortness of breath
- Skin problems, such as rashes, itching, and hives
- Neurological problems, such as headaches, dizziness, and memory loss
- Digestive problems, such as nausea, vomiting, and diarrhea
- Immune system problems, such as fatigue, weakness, and frequent infections

Tox Sick can be a very serious condition, and it can even be life-threatening in some cases.

How to Heal from Tox Sick

If you think you may be suffering from Tox Sick, it is important to seek medical help immediately. There is no cure for Tox Sick, but there are treatments that can help to relieve symptoms and improve your quality of life.

The first step in treating Tox Sick is to identify the source of the mold exposure. Once the source has been identified, it is important to remove or remediate the mold. This may involve cleaning moldy surfaces, repairing leaks, or replacing moldy materials.

Once the source of the mold exposure has been removed, you will need to begin a detoxification program. Detoxification helps to remove mold toxins from your body and reduce your symptoms.

There are a number of different detoxification methods available, including:

- Sauna therapy
- Infrared sauna therapy
- Chelation therapy
- Liver detox
- Kidney detox

Your doctor will help you choose the best detoxification method for you.
